Abstract

The Heavy Metal Tested & Certified heavy-metal-safety standard for cannabis tinctures and sublingual oils (Cannabis, Hemp, and CBD Products), evaluated on the finished oral/sublingual liquid as sold. Each limit is the strictest sovereign cannabis heavy-metal action level applicable to the ingestion route; total chromium is a screening ceiling with hexavalent chromium as the binding control, and inorganic arsenic, methylmercury and Cr(VI) are enforced by reflex speciation.

1 | How every number on this standard is set

HMTc Method v2.0 (government-limit default, route-preserving; strictest applicable sovereign cannabis maximum; occurrence never selects a value)

2 | Master limit table

All values in ppb (µg/kg), as sold basis. A brand meeting every value qualifies for the mark.

ANALYTE	HMTC LIMIT	BASIS
Lead (Pb)	500	sovereign maximum level (US-CA)
Cadmium (Cd)	500	sovereign maximum level (US-CA)
Total arsenic (tAs)	500	sovereign maximum level (US-MA)
Inorganic arsenic (iAs)	≤ tAs	bounded by tAs (reflex speciation)

Mercury, total (tHg)	100	sovereign maximum level (Israel)
Methylmercury (MeHg)	≤ tHg	bounded by tHg (reflex speciation)
Nickel (Ni)	800	read-across (EU 2024/1987)
Tin (Sn)	250,000	read-across (Singapore)
Aluminium (Al)	100,000	read-across (China)
Total chromium (Cr)	1,100,000	sovereign maximum level (US-MD)
Hexavalent chromium (Cr-VI)	≤ Cr	bounded by Cr (reflex speciation)

3 | Derivation — where each number comes from

Every cell traces to one named sovereign maximum level (the strictest for the nearest analog), or to an explicit control, not-material, or species-bounded determination. No occurrence statistic selects a certification value.

ANALYTE	HMTC	SOVEREIGN ANALOG / DETERMINATION
Lead (Pb)	500	sovereign maximum level (US-CA)
Cadmium (Cd)	500	sovereign maximum level (US-CA)
Total arsenic (tAs)	500	sovereign maximum level (US-MA)
Inorganic arsenic (iAs)	≤ tAs	bounded by tAs (reflex speciation)
Mercury, total (tHg)	100	sovereign maximum level (Israel)
Methylmercury (MeHg)	≤ tHg	bounded by tHg (reflex speciation)
Nickel (Ni)	800	read-across (EU 2024/1987); cereals except durum/rice/husked-rice/-pseudocereal/oat rows
Tin (Sn)	250,000	read-across (Singapore); any food
Aluminium (Al)	100,000	read-across (China); baked foods (bread, pastries, cakes, biscuits, cookies, crackers); deep-fried flour products; batter, breading, and frying powder
Total chromium (Cr)	1,100,000	sovereign maximum level (US-MD)
Hexavalent chromium (Cr-VI)	≤ Cr	bounded by Cr (reflex speciation)

STATUS AND LICENCE

A normative certification standard, editorially reviewed and version-controlled in-house; every value traces to a named sovereign maximum level, disclosed in the derivation. © 2026 Institute of Contaminant Standards / Heavy Metal Certified. All rights reserved.

COMPETING INTERESTS

This standard is published by the Heavy Metal Tested & Certified (HMTc) program, operated by the Institute of Contaminant Standards. Its statements about government regulations, toxicology, and occurrence are sourced to the cited primary and expert-body records and to the independently maintained Heavy Metal Index; the program's own certification thresholds are not used as evidence for any factual claim made here.

DATA AVAILABILITY

The works this standard draws on are listed in full in the references above and on the standard page at https://heavymetalcertified.com/standards/cannabis-tinctures-oils. Primary legal instruments and expert-body assessments are
